VoltBay website walkthrough: who says what

Six members show the live website, each one a different part of it, in the order a shopper would meet it. About 20 minutes, then questions. Replace "Member 1 to 6" with your names.

Member	Part of the website	Minutes	What you show
1	Home page and finding a product	0 to 3.5	Open the site, colours, search, sort, flash deals, product window, wishlist, compare.
2	Gaming, VoltBuild and VoltCustom	3.5 to 7	The Gaming Arena and its ready-made setups, the PC builder, and the gaming gear designer.
3	Recommended for you and Ask VoltAI	7 to 10	The personalised shelf with reasons, and the AI shopping assistant.
4	Cart, deals and checkout	10 to 13	The cart drawer, coupon, add-ons, placing an order and the receipt.
5	Account, reviews and Book a Repair	13 to 16	Sign in, my orders, reviews, and booking and tracking a repair.
6	Admin panel, then safety and the live site	16 to 20	The owner's view, how it is protected, tested and hosted. Closes the talk.

RULES FOR EVERYONE

- Say what you click, then say one or two sentences about it. Do not read the screen aloud.
- Always say "demo store" for money matters: orders are pay on delivery, prices are indicative, nothing real is charged.
- End with a hand-over line that names the next member.
- Photos come from Wikimedia Commons with their licences. A few generic products (headset, monitor, chair, webcam) use representative photos and say so.

BEFORE YOU START (DO THIS 10 MINUTES EARLY)

- Open **https://voltbay-store.onrender.com** and click around. The free plan sleeps when idle and the first load can take up to a minute.
- **Member 5:** create a demo account, buy one item with it, and leave that browser window signed in. This is needed to show "my orders" and a review.
- Use one laptop and one browser window for the whole demo, and agree who types for each member. Zoom the browser to 110 to 125 percent so the back row can read it.
- Keep the admin email and password ready, but never show the password on screen.

Be honest about three things. VoltBuild uses demo parts with made-up prices (its rules are real). VoltCustom designs are saved as requests; the store quotes custom items. Repairs are a demo service with no real technician. If someone asks, say so; it shows you know your own project.

1 Member 1: Home page and finding a product

About 3.5 minutes | Opens the talk

Opening line: "Good morning. We are Team [name]. This is VoltBay, an electronics store we built and put on the internet. I will show how a shopper finds a product."

1. Show the home page top (20 sec)

Say: "This is the home page. It has 15 departments, and the six coloured dots next to the cart change the colour theme of the whole site."

2. Click a department tile, such as Tablets and E-readers (30 sec)

Say: "There are 69 real products. Each department shows its own products, such as the iPad and the Kindle."

3. Type "samsung" in search, then choose Sort: Price low to high, and tick In stock only (40 sec)

Say: "Search works by name or product code. I can sort by price and hide anything that is out of stock."

4. Scroll to Flash deals (20 sec)

Say: "Four products have flash deals with a countdown: 10, 20, 15 and 25 percent off. The discount is applied at checkout."

5. Click a product, for example Google Pixel 8 (60 sec)

Say: "The product window has a real photo, a short description, highlights and a full specification table. At the bottom you see the photographer's name and licence, because the photos come from Wikimedia Commons. 'You may also like' suggests similar products."

6. Click the heart on a card, then open Saved items; click Compare on two products and open Compare (30 sec)

Say: "I can save products to a wishlist and compare up to four side by side."

FACTS TO REMEMBER

- 69 products, 15 departments, every photo credited. Specs are the manufacturers' published figures; prices are indicative.
- Products out of stock cannot be added to the cart.

IF SOMEONE ASKS

Are these real products? Yes, real models. The prices are indicative because it is a demo store.

Why do some photos look generic? A few items, like the headset and the monitor, are generic types, so we use a representative photo and say so.

Hand over: "Now Member 2 will show our specialist pages for gamers and PC builders."

2 Member 2: Gaming, VoltBuild and VoltCustom

About 3.5 minutes

1. Click Gaming in the top bar (45 sec)

Say: "This is the Gaming Arena. It has a featured product, ten categories such as consoles, controllers, VR, keyboards and chairs, and 14 gaming products. The numbers on the tiles come from the live catalogue."

2. Click the Consoles tile, then scroll to Ready-made setups and press Add all to cart on Console starter (45 sec)

Say: "I can filter by category. The ready-made setups pick products from the store, a console, a controller and a headset, and one button puts them all in the cart. The cart is saved on the server, so it will still be there later."

3. Click VoltBuild (60 sec)

Say: "VoltBuild is a PC builder. You choose a processor, motherboard, graphics card, memory, storage, case, power supply and cooler. It adds up the price and the estimated power use, and the compatibility report tells you if parts do not fit, for example a processor and a motherboard with different sockets. In this version the parts are demo samples with made-up prices, but the compatibility rules are real."

4. Click VoltCustom, then a ready-made look such as Competitive FPS (60 sec)

Say: "VoltCustom lets a gamer design a matching keyboard, mouse and mousepad: colour theme, keyboard size, switch type, keycaps and RGB effect. The picture is a 2D mockup, not a photo. Catalogue items can go in the cart, and custom-made items are sent to the store as a request, because the store quotes the price."

FACTS TO REMEMBER

- Gaming: 10 categories, 14 products. Setups only use products that are in stock.
- VoltBuild: 8 part types, demo parts, real compatibility checks, budget box and a total.
- VoltCustom: 10 themes, 7 ready-made looks, switch types Linear, Tactile, Clicky and Hall Effect.

IF SOMEONE ASKS

Are the VoltBuild parts real? No, they are demo parts so we can show the idea. The real version would use the real catalogue.

Does VoltCustom change the price? The preview does not. Custom-made items get a price from the store when you send the request.

Hand over: "Now Member 3 will show how VoltBay helps you decide."

3 Member 3: Recommended for you and Ask VoltAI

About 3 minutes

1. Open two or three gaming products (close each), go to Home and scroll to Recommended for you (50 sec)

Say: "VoltBay watches what you do: the products you open, what you search for, what you save, compare and put in the cart. Look at Recently viewed, and under Recommended for you every card says why it was chosen, for example 'Because you looked at Microsoft Xbox Series X'. A new visitor sees staff picks instead."

2. Click Ask VoltAI, type "my budget is 30000, suggest a good phone" and send (60 sec)

Say: "This is VoltAI, our shopping assistant. The header shows it runs on Google Gemini. It searched the store and answered with real products under my budget, with photos and prices. It also remembered my budget, so the recommendations now stay within it."

3. Press Add on one of the products in the answer, then press Confirm (30 sec)

Say: "The AI cannot change my cart on its own. It asks me first, and nothing is added until I press Confirm."

4. Ask: "which is better, a console or a gaming PC?" (20 sec)

Say: "It also answers buying questions in plain language, and compares products."

FACTS TO REMEMBER

- VoltAI has 10 tools: search, details, compare, recommend, view cart, track order, add and remove (with Confirm), set budget, remember preferences.
- Limits protect the key: 200 AI requests a day for the whole store, 25 answers per shopper. If the AI is slow or busy, a built-in offline assistant answers instantly, so there is never an error.
- Your own budget can be seen and deleted in your account ("what VoltAI remembers").

IF SOMEONE ASKS

Can the AI invent prices? No. Prices and stock come from the store database through its tools.

What if Gemini is down? The offline assistant takes over automatically.

Hand over: "Now Member 4 will take these products through the cart to checkout."

4 Member 4: Cart, deals and checkout

About 3 minutes

1. Add the Nothing Phone (2a) and a USB-C cable, then click Cart (30 sec)

Say: "The cart drawer shows each item with plus and minus buttons. The Nothing Phone has a flash deal, so its discount is already included."

2. Show the delivery PIN box, then type VOLT10 in the coupon box and press Apply (40 sec)

Say: "Delivery is free above 999 rupees, and a progress bar shows how close you are. The coupon VOLT10 gives 10 percent off, and the total shows how much you saved."

3. Click Add on Extended warranty (20 sec)

Say: "There are four optional add-ons: home delivery, extended warranty, 30-day return cover and installation."

4. Type a name and press Place order; point to the order number on the receipt (50 sec)

Say: "When I place the order, the server checks the stock again, reduces it and saves the order in one safe step, so two people cannot buy the last item. The final price is worked out on the server, not in the web page, so nobody can change it. The receipt shows the order number. Payment is pay on delivery; this is a demo store, so no real money moves."

5. Reload the page (F5) with something in the cart (20 sec)

Say: "The cart is still here. It is saved on the server, linked to a private token in the browser."

FACTS TO REMEMBER

- Total = subtotal minus coupon minus deals plus add-ons. Delivery is 99 rupees, free above 999. Warranty 499, return cover 149, installation 199.
- Flash deals: Nothing Phone 10%, Bose QuietComfort 20%, Apple Watch 15%, outdoor camera 25%.
- A double click on Place order does not create two orders.

IF SOMEONE ASKS

Can I pay online? Not yet. Online payments and email confirmations are our first next step.

What if the item sells out while it is in my cart? Checkout tells you which item is short and does not place the order.

Hand over: "Now Member 5 will show accounts, reviews and the repair service."

5 Member 5: Account, reviews and Book a Repair

About 3 minutes | Needs the demo account from the checklist

1. Click Sign in, and show the Create an account link (20 sec)

Say: "Anyone can shop without an account. If you create one, your guest cart moves into it, and if you sign in to an existing account, the guest cart is merged, so nothing is lost. Passwords need at least eight characters and are stored scrambled."

2. Click your name (top right) to open the account window (45 sec)

Say: "Here I see what VoltAI remembers about me, such as my budget, and I can delete it with Forget. Below that are my orders with their status: Pending, Packed, Shipped or Completed."

3. Open the product you bought and scroll to Customer reviews; write a short review and press Post review (45 sec)

Say: "Only a signed-in customer who really bought this product can review it, once, and they can edit it later. The server checks the order history, so fake reviews are blocked. The stars on the product card are the real average."

4. Click Book a Repair, fill the form and press Submit request (50 sec)

Say: "A customer can book a repair for a phone, laptop or gaming accessory. The form checks the phone number and email. I get a repair ID, and the shop owner sees the booking in the admin panel. This is a demo service, so no real technician is notified."

5. In Track a repair, enter the ID and press Check status (20 sec)

Say: "I can track my repair with the ID. From another device I also need the last four digits of my phone, so strangers cannot look at other people's repairs."

FACTS TO REMEMBER

- Repair statuses go from Request received to Inspection pending, Under diagnosis, Estimate provided, Repair approved, Repair in progress, Ready for collection and Completed (or Cancelled).
- Posting the same repair twice by accident creates only one booking.

IF SOMEONE ASKS

Is my password safe? It is stored only as a one-way scrambled value (scrypt), and sign-in attempts are limited.

Why can I not review a product I did not buy? To keep reviews honest, the server only allows buyers.

Hand over: "Now Member 6 will show what the owner sees and how we kept it safe."

6 Member 6: Admin panel, safety and the live site

About 4 minutes | Closes the talk

1. Sign out, show there is no Admin menu, then sign in as admin; open Admin, Manage store (30 sec)

Say: "Shoppers never see an Admin menu. This is enforced by the server, not just hidden: any admin request without the admin sign-in is refused. I will sign in as the owner. Please look away from my password."

2. Show Overview, then Inventory: change a stock number (40 sec)

Say: "The overview shows real revenue from stored orders, stock value, items that need restocking and sales by category. In Inventory the owner edits price and stock, adds products or imports a CSV file, and the change is saved on the server."

3. Show Orders (change a status), Reviews and Repairs (30 sec)

Say: "Orders can be moved from Pending to Completed. Reviews can be removed. Repairs booked by customers arrive here, where the owner sets the status and an estimate."

4. Show AI control (30 sec)

Say: "Here the owner sees how many AI requests were used today, can switch VoltAI off completely with one button, and can switch each tool on or off, for example the budget tool."

5. Say the safety and launch facts (60 sec)

Say: "To keep it safe, passwords are hashed, login attempts are limited, private files and the database cannot be downloaded, and the server sends strict browser security headers. We have 21 automated server tests and 9 tests where a real Chrome clicks through the shop, checks out, signs in as admin and posts a review; all pass. The code is on GitHub, a Dockerfile packages it, and Render runs it online. The AI key and admin password are kept as private settings, never in the code."

6. Close (20 sec)

Say: "On the free plan the site sleeps when idle and its data resets on restart. Next we would add online payments, email confirmations, a permanent database and more real products. Thank you. Our live site is voltbay-store.onrender.com and our code is on GitHub. We are happy to take your questions."

IF SOMEONE ASKS

Can a customer open the admin page by guessing the address? No. Visitors get a refusal (401 or 403), and the admin script is only sent after the admin signs in.

Why does the data reset? The free server has no permanent disk. A paid disk or an outside database fixes that.

VoltAI Command and VoltShield, are they real? No, they are simple rule-based demos in the admin panel, not real AI monitoring or fraud detection.

Questions and answers for everyone

Anyone can answer. If you are unsure, say "Member N can answer that".

Question	Short answer	Who
Which technology did you use?	Node.js 22 with the built-in SQLite database, plain HTML and JavaScript in the browser, and Google Gemini for the assistant. No extra packages.	Member 6
How does the cart stay after I reload?	The browser keeps a private token. The server stores only a scrambled copy and keeps the cart in the database for 90 days.	Member 4
How do recommendations work?	By what the shopper viewed, searched, saved and bought, with recent actions counting more. Each card shows its reason.	Member 3
What stops the AI from costing a lot?	Daily limits (200 requests a day for the store, 25 per shopper). After that, the offline assistant answers.	Member 3
Can someone cheat the price or stock?	No. The server calculates the price and checks the stock when the order is placed.	Member 4
Can anyone post a fake review?	No. Only a signed-in customer who bought the product, once.	Member 5
How is the admin panel protected?	Every admin request needs the admin sign-in, and the admin script is only sent to the admin.	Member 6
How do you know it works?	21 server tests and 9 real-browser tests pass, and we check the live site after every update.	Member 6
Why is the first load slow sometimes?	The free hosting plan sleeps when idle and takes up to a minute to wake up.	Member 6
Is this a real shop?	A working demo store. Products and specifications are real, prices are indicative, and payment is pay on delivery with no real money.	Member 1
Are VoltBuild's parts real?	No, they are demo parts with made-up prices. The compatibility rules are real.	Member 2
What would you add next?	Online payments, email confirmations, a permanent database, more real products (especially monitors) and real fraud checks.	Member 6

IF SOMETHING GOES WRONG DURING THE DEMO

- **The page is slow or blank:** wait up to a minute and refresh. The server was asleep.
- **VoltAI answers "Offline assistant":** say "when the AI service is busy, our offline assistant answers instead; that is a feature." Then continue.
- **The demo account is gone:** the free server restarted, which resets data. Create a new account and buy one item, or skip the review step and explain it.
- **No internet at all:** use the screenshots in the presentation file (VoltBay_Presentation_final.pptx).
